ABSTRACTED-PUB-NO: KR2004071470A

BASIC-ABSTRACT:

NOVELTY - A device and a method for issuing an evidential document using the Internet are provided to secure the reliability for the document by performing the application and the issuance of the evidential document on the Internet, and offering a certification tool for the online-issued evidential document to an issuance requestor and the third person receiving the document.

DETAILED DESCRIPTION - A document issuance requesting computer(40) requests the issuance for the evidential document through the Internet. A monitor(42) outputs a background screen for the evidential document. A document issuance information proving server(52) transmits a digital file for the evidential document and a logo of an issuance authority to an issuance agent server(34). A guarantee server(50) transmits the guarantee contents for guaranteeing the digital file to the issuance agent server. The issuance agent server forms the background screen for the evidential document from the digital file, and transmits the data by overlapping the issuance authority logo respectively transmitted from the issuance information proving server and the guarantee server on the background screen.
